The Ultimate Modular Surface

Authentic play, with the safety of Sport Court®.

World's Largest CourtBuilder™

A Safer Court

Unlike unforgiving acrylic, asphalt or concrete, Sport Court's surface is engineered to provide players of all ages a significantly safer surface. Engineered to absorb shock and reduce the risks of abrasions, injuries and joint strain, so you and your family can enjoy hours of play with less strain on your bodies.

More Shock Absorption

Shock absorption is the ability of the surface to absorb the energy of an impact. Sport Court's SpotGame PB surface was engineered with athletes in mind, and incorporates shock absorption properties to reduce the risk of short and long-term injuries.

Minimum safety standards to meet ASTM F2772 Class 1 classification for indoor sports floors is 10%.

With <1% shock absorption, painted acrylic is not a safe sports surface for injury prevention.

Shock Absorption Level

True Lateral Forgiveness™

Too much lateral movement is like trying to change direction while running on ice; you keep sliding. Not enough lateral movement can create strain on your muscles and joints. Unlike a hard court, Sport Court's SportGame PB surface absorbs the transition forces generated from sudden shifts in direction, reducing the risk of muscle and joint injuries.

Designed for Excellent Traction

Sport Court's SportGame PB surface is specially designed for excellent traction, and has a lower chance of skin damage from slips and slides compared to hard courts.

Asphalt, concrete and acrylic are much more abrasive and will cause injuries to skin when falling.

A better alternative to hard courts

- ✓ Lower skin abrasion compared to traditional hard court surfaces
- ✓ Sport surface properties such as shock absorption and patented Lateral Forgiveness™ reduce joint strain and fatigue
- ✓ Special UV stabilizers protect from fading
- ✓ Specially engineered for authentic play
- ✓ Excellent dry and wet traction properties

Enhanced Playability

Sport Court's SportGame PB surface delivers the consistent ball bounce and precise control that players prize. The strong tile-locking system creates a remarkably stable surface. And there's less time out after it rains, because the unique grid design improves water drainage and water rebound.

Exceptional Durability

The advanced copolymer tiles are highly resistant to impacts, moisture, and extreme temperatures. Patented UV protection ensures colors remain vibrant year after year. Unlike a traditional hard court, the Sport Court SportGame PB surface won't crack, dip or require regular resurfacing and is backed by an 15-year limited warranty.

Minimal Maintenance

Like all Sport Court outdoor surfaces, our SportGame PB surface requires very little maintenance — unlike acrylic courts, which require costly professional care. Simply clean your court as needed using a hose to remove dust and dirt, or your local Sport Court CourtBuilder can provide a more detailed periodic cleaning and maintenance program customized to you.

It's hard to imagine a better experience working with contractors than the one we just had with the Sport Court team. The work is exemplary, they will go that extra mile, they take input and feedback in their stride and communicate effectively.

In summary - you'll be working with grown ups, who are very experienced and totally dedicated to doing a first rate job. Also, If you're on the fence about investing in a Sport Court I recommend getting off it, don't postpone this one - the smiles from my newly blended family as they work out, play pickle ball and practice for hoops are worth every penny.

-Will Novy-Hildesley
